Project proposal

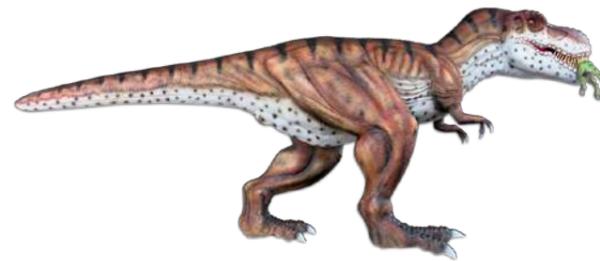

After analyzing the park venue and understanding the needs of our clients, we will divide the entire place into different functional areas according to the layout provided by them. Our professional design team will make a 3D design scene and then we will give you a proposal about where to place the dinosaurs.

Project proposal

In order to make the park more attractive, we will carefully design different dinosaur scenes instead of arbitrarily placing some regular dinosaurs.

We provide professional on-site installation assistance to ensure all of your items are running in the right way.

We have a strict quality control and we will provide pictures for you to check during every production process and we will continue only after getting your conformation.

Animatronic Dinosaur is a robotic model to emulate dinosaur species which once existed in this world centuries ago. Just because of its extinction, increasing the difficulty of reappearing them in our eyes. A lifelike dinosaur comes to life only after if we making frame, set up electric system, shaping, making texture, grafting skin and painting. They can be driven by electric or pneumatic, and be used in parks, shopping malls, museums etc.

T-rex

Living in the Cretaceous period

Length: 11.5-14.7m

The fiercest dinosaur with large skull and two fingers on forepaw

Weight: 12 kg

Animal

Fiberglass sculpture has several advantages over other materials. It is waterproof, sunproof and can withstand bad weathers. We will do two time UV-protection treatment so the color can stay for a long time. Creating a fiberglass sculpture is a time-consuming, labor-intensive process, but it is an excellent way to create works of art that will last for decades to come.
